We aim to be the authoritative resource in the fields of organ and cell transplantation by representing our members and their patients as we advocate for comprehensive and innovative solutions to their needs.

ASTS Meetings Receive Rave Reviews!

The symposium has been one of the best educational experiences of my fellowship.

- David Aranovich, MD

In this issue of the Chimera we report on the success of the recently concluded 4th Annual Surgical Fellows Symposium held in Scottsdale, Arizona. Skip over to page 20, fellows share their experiences about a meeting they say has been the highlight of their fellowship. The meeting is designed for second year fellows in an ASTS accredited fellowship program. Through a series of lectures and interactive sessions, fellows gained focused knowledge, especially in areas that have been identified as underemphasized in many training programs.

It is worth every penny and the time you spend there.

- Betsy Tuttle Newhall, MD

The participants have spoken.
The inaugural ASTS Leadership Development Program was triumphant!
The program is built to be a premiere executive management course tailored toward individuals seeking the essential skills necessary to successfully lead transplant centers within a complex financial and regulatory environment. Attendees left the meeting invigorated with new enthusiasm and insight into the business side of transplant. Scroll to page 22 for a full review.

On the heels of these meetings is the ASTS 11th Annual State of the Art Winter Symposium.

Have Your Say!

This newsletter is for you.
The Chimera serves as a resource to highlight transplantation issues, society news and events, and transplantation accomplishment events.

If you have an idea or want to place an item in the Chimera, please contact Chantay Parks Moe for more information.

Early Registration is Open!
The meeting takes place in Hollywood, Florida, January 13-16, 2011, entitled Transplantation at the Crossroads. The Pre Symposium session is Pay for Performance: An Update on National Quality Improvement Initiatives. Representatives from key stakeholders such as the American Medical Association and the American College of Surgeons will be presenting. Other events taking place this year are Lunch and Learn sessions designed to facilitate in-depth round table discussions on vascularized composite allotransplantation, changes in educating fellows and residents, how surgeons can obtain CMS bonuses and more. When sketching out your symposium agenda, make plans to attend other events such as the Business Practice Seminar, the surgical video presentations, My Soap Box Session, Career Development Seminar, debates and more. A complete program overview can be found on pages 15-19.

Follow us on Facebook!

You can now follow ASTS on Facebook. The ASTS URL is www.facebook.com/americansocietyoftransplantsurgeons, where you can click the like button to become a fan. In addition to Facebook, keep up with ASTS via RSS Feeds, http://www.asts.org/TheSociety/rssFeeds.aspx.

If you have an idea or article that you would like to see in your newsletter, send it to me. I’m looking for new ideas every day. I hope you enjoy the issue!

President’s Letter

In recent months, I’ve used the words momentum, strength, and success to articulate the swift progression of ASTS within the last decade. We’re a society standing firm on our stated mission to help foster, advance and guide transplantation efforts, increase organ donation, define and promote training, and advance the professional development and careers of our members.

We have made tremendous strides in our efforts to make a difference in the lives of members, their patients, and the many others impacted by transplantation. As we continue on this exciting journey, it is often helpful to revisit our purpose. To this end, the Council of your society recently formulated a vision. As you might well imagine there was a lot of constructive deliberation and debate that led to the following statement:

We aim to be the authoritative resource in the fields of organ and cell transplantation by representing our members and their patients, as we advocate for comprehensive and innovative solutions to their needs.

– ASTS Vision

Make no mistake, this vision is not new. But we have not previously drafted a statement that captures the direction of many of the initiatives that the ASTS has been, and is actively engaged in, and that succinctly and precisely defines the essence of our purpose. Every word is measured and is meant to convey a number of direct and implied objectives. Taken together, these words project the sense of common purpose, the sense of shared destiny and the pride of membership that we hope is felt by every one of our members.

ASTS has had far more successes in recent months than I can recount in this one letter, but a few are worth special mention, for instance, the recent development and implementation of a highly successful inaugural Leadership Development Program. I would like to thank David Axelrod, MD, MBA, Chair, Business Practice Services Committee for his leadership efforts, and Laurie Kulikosky, CAE, Director, Strategic Development, for helping to manage the program which was launched at the Kellogg School of Management at Northwestern University in November, and most importantly those 60 colleagues who attended and participated in this successful event. The two-day meeting offered a unique combination of core business skills and transplant specific applications. We have received overwhelmingly positive feedback from participants and are currently fielding enrollment of 60 participants to allow for a more interactive and intimate learning environment. If you would like to be added to the waiting list for the 2011 course, contact Laurie at the ASTS national office, laurie.kulikosky@asts.org. Once again, attendance will be on a first-come, first-served basis.

On other fronts, ASTS, in collaboration with AST, continues to push the Arizona legislature to overturn its decision to deny organ transplants to Medicaid beneficiaries. We have reviewed the evidence base used by Governor Jan Brewer (R-AZ) and the Arizona Legislature to deny care and have concluded that the data are flawed and outdated.

The new law which denies Medicaid beneficiaries coverage for specified transplants (liver transplants for hepatitis C recipients, lung transplants for all recipients, cardiac transplants for non-ischemic cardiomyopathy and finally pancreas-after-kidney transplants) gravely disadvantages Arizona citizens by denying those dependent on the Arizona Health Care Cost Containment System (AHCCCS) access to medical practice considered the standard of care. As the nation’s major societies representing transplant professionals, it is our obligation to provide expertise and guidance to make sure that economic or political coverage decisions are not disguised by lawmakers as being founded in medical justification. Please refer to ASTS press release http://www.asts.org/Tools/News.aspx?content_id=908. It should again be noted that the AST has been a strong partner in this initiative, as has UNOS. While we cannot dictate the decision of Arizona lawmakers, we hope that we have provided them with the requisite medical information that they will reverse a decision that should be condemned on both humanitarian and egalitarian grounds. If the decision is not reversed, we feel that we would have at least provided compelling evidence that the medical data used to inform their decision was flawed at various levels.

As you may have noticed, central to the ASTS vision, is the concept of advocacy for our members and their patients. There can be little doubt that through initiatives such as this and others, we are living our vision and purpose.

As we look forward to 2011, ASTS is preparing for its 11th Annual State of the Art Winter Symposium, January 13-16, 2011 in Hollywood, Florida. This meeting, held in collaboration with the NATCO Symposium for Advanced Transplant Providers has taken shape to become a premier resourceful event. This year’s theme, Transplantation at the Cross Roads, will feature expert presentations,
seminars, debates, and other sessions centered around investigative and scientific exchange associated with the growth of transplantation and the impact on patient outcomes. I’m headed down early to lead the ASTS Council and Committee Chair meeting, and there are three reasons why I believe you should meet me at the symposium, 1) powerful agenda – become more informed about critical issues in the field; 2) influential participants – get face-to-face time with key leaders and come together with other members to forge new associations and share valuable information; and 3) forward thinking activities – this year ASTS is doing things a little differently, offering new sessions such as My Soap Box Session, Posters of Distinction, Lunch and Learn sessions and more. Flip to pages 15 – 19 for a full review of symposium events or visit the ASTS website at http://www.ast.org/Meetings/StateArtWinterSymposium.aspx. Registration is discounted through January 5.

Finally, I want to specifically comment on the level of cooperation between ASTS, AST and UNOS in the past few months. I am especially grateful to Dr. Maryl R. Johnson, AST President, and Mr. Charlie Alexander, UNOS President, for the level of collaboration and collegiality that they and their executive boards have demonstrated in dealing jointly with several issues related to health policy, regulatory and legislative issues and other initiatives that affect transplant professionals, their patients and the transplant community at-large.

In August, ASTS and AST, alongside HRSA, met with the Agency for Healthcare Research and Quality (AHRQ) to discuss areas of shared interest and possible collaboration. This dialogue will continue early next year with another meeting to discuss the recommendations from the recent Living Kidney Donor Follow-Up conference. In October, ASTS, AST and UNOS urged the Arizona Governor and Legislature to reconsider its decision to eliminate specified transplants for residents dependent on its state Medicaid benefits. Our joint efforts have resulted in the first Arizona Bill of 2011 being filed to restore coverage to those impacted by the new law. In November, ASTS and AST petitioned HRSA to ensure that program specific reports (PSRs) and access to data would not be negatively impacted as HRSA transitions to a new SRTR contractor. This month ASTS, AST and UNOS will meet with CMS leadership to discuss pancreas acquisition costs and its impact on islet cell transplantation as well as the contrast between OPO and transplant center outcome measurements. Additionally, ASTS and AST will submit comments to Howard Koh, HHS Undersecretary, regarding the oversight of organ evaluation and quality and improved inter-agency communication. I encourage you to watch the ASTS website “Advocacy” section for updates on these and other initiatives.

It is clear that this unprecedented level of collaboration between our organizations has led to our joint ability to “move the needle” on several issues, much more effectively than we would have “going it alone.”

In closing, I encourage you to contact me personally, or the ASTS national office, to voice your opinions or concerns – especially if you feel that ASTS, as a Society can help. I also encourage you to engage more in the Society. This is your society, so please take the initiative and contact us with your thoughts. You can contact me directly at mabecass@nmh.org or through Your Opinion Matters on the ASTS home page.

Warmest Regards,

Michael M. Abecassis, MD, MBA
ASTS President

In Memoriam - Mark D. Pescovitz, MD

The American Society of Transplant Surgeons (ASTS) is deeply saddened at the loss member Mark D. Pescovitz, MD. Dr. Pescovitz died December 12 in Michigan from injuries he sustained during a car accident. Dr. Pescovitz was Professor and Vice Chair for Research in the Department of Surgery, Professor of Microbiology/Immunology and Director of the Transplant Immunology Laboratory at Indiana University School of Medicine in Indianapolis. He received his undergraduate and medical degrees from Northwestern University in Chicago and completed general and abdominal transplant surgery training at the University of Minnesota.

Dr. Pescovitz’ research included porcine T-cell immunology, B-cell immunology, diabetes, clinical transplant immunosuppression, and cytomegalovirus disease. He completed a 4-year research fellowship in the Immunology Branch of the National Cancer Institute focusing on porcine immunology.

Dr. Pescovitz was a member of the ASTS since 1990, receiving the ASTS Sandoz Fellowship Award in 1987-1989. He served on the Bylaws and the American Transplant Congress (ATC) Program Planning Committees. He contributed to the development of ATC in its early years and co-chaired the 2005 Congress held in Seattle. Dr. Pescovitz was an associate Editor of the American Journal of Transplantation and served on various UNOS committees and on the editorial boards of the Transplantation, Clinical Transplantation, and Reviews on Clinical Transplantation.

He leaves behind his wife, Ora Pescovitz, MD, CEO of the U-M Health System and Executive Vice President for Medical Affairs at the University of Michigan, and their three children, Aliza, Naomi, and Ari.
ASTS News
The ASTS Fall Council Meeting was held September 20, 2010 in Chicago, IL. Following are select committee news and reports from the meeting.

Awards Committee
The majority of the committee’s recent work has focused on the development of a three year strategic plan focused on supporting research, showcasing research and reviewing applications. The committee will review the website, online application and online review system and make recommendations for improvements. To showcase awards, the committee will develop an outcomes database to track applicants and awardees and will use the data to promote new funding and enhance the publicity of awards. The committee will also collaborate with the Communications, Fellowship Training and Curriculum Committees to highlight award recipient research.

Advanced Transplant Provider Committee
The Advanced Transplant Provider (ATP) Committee will host at least one Lunch & Learn at the winter symposium designed to address topics relevant to advanced transplant providers and encourage interactions with NATCO attendees. The committee is also looking forward to reviewing the nominations for the inaugural ATP award to be presented at the winter symposium. Finally, the committee would like to launch a program titled “Expert of the Week” in 2011. The idea is for the committee, and ASTS members at large, to watch certain modules in the curriculum and then the author would be available on the ASTS discussion board to answer questions from those who had viewed the module.

Vanguard Committee
The Vanguard Committee continues its work on the 11th Annual State of the Art Winter Symposium: Transplantation at the Crossroads. Notable presentations this year include the keynote address, Health Care Reform is Good for Transplantation, which will feature Drs. Lynt Johnson and Amy Friedman, and the David Hume Lecture, Crossroads of the Past honoring Dr. J. Wesley Alexander and supported by AFDT. This year’s symposium will feature several new items including “Poster of Distinction” awards, “My Soap Box Session” where presenters get five minutes to share their views on expanding the donor pool and “Lunch & Learn Sessions” that provide topic-focus discussions on a variety of society activities. The committee announced that the 12th Annual State of the Art Winter Symposium is titled Surgical Challenges – Creative Solutions and will be held, January 12-14, 2012 at the Lowes Miami Beach Hotel. The symposium will focus on issues specific to surgeons and highlight particular challenges encountered in the OR.

CME Committee
The CME Committee has started the process to provide CME for select curriculum modules. The committee will write the ACCME documentation in collaboration with the National Office. Web modifications and/or new technology will be necessary to provide CME credits on a pay-per-use basis. The committee is also examining the feasibility of converting the current curriculum modules into more portable formats. Finally, the committee is seeking video archives from pioneers to add to a video library on the ASTS website and will collaborate with the ASTS Historian on this project.

Government & Scientific Liaison Committee
Dr. Hanto provided an update from the recent TAC meeting and put forward several items for council consideration. The TAC continues to support the creation of a monthly reading program presented by Dr. Abecassis, a debate, Health Care Reform is Good for Transplantation, which will feature Drs. Lynt Johnson and Amy Friedman, and the David Hume Lecture, Crossroads of the Past honoring Dr. J. Wesley Alexander and supported by AFDT. This year’s symposium will feature several new items including “Poster of Distinction” awards, “My Soap Box Session” where presenters get five minutes to share their views on expanding the donor pool and “Lunch & Learn Sessions” that provide topic-focus discussions on a variety of society activities. The committee announced that the 12th Annual State of the Art Winter Symposium is titled Surgical Challenges – Creative Solutions and will be held, January 12-14, 2012 at the Lowes Miami Beach Hotel. The symposium will focus on issues specific to surgeons and highlight particular challenges encountered in the OR.

Curriculum Committee
The curriculum is currently 51% complete with 92 modules available online. Over 180 ASTS members have accessed the curriculum over 820 times. The resident curriculum has over 30 modules available. Residents must sign in with their OPTN center code and thus far 57 centers have viewed over 600 modules. Finally, the committee is developing a strategy for long-term maintenance of the curriculum and is seeking ways to make this a society-wide endeavor. The council is interested in increasing curriculum usage and encouraged the committee to develop a plan to incentivize curriculum usage amongst training programs and fellows.

Fellowship Training Committee
Match statistics from the 2010 Match for appointment year 2011 are available on the ASTS website. The only notable change this year was a nine percent increase in the number of FMGs that matched into fellowship slots. The committee has launched a monthly e-newsletter for program directors which has been well received. Future editions will also be posted on the ASTS website. Additionally, the committee hosted
three program director call-in sessions throughout September to discuss the new Annual Volume Review program and address questions. At the council’s direction, the committee has engaged AHPBA in discussions about HPB training and volume metrics.

FMG Task Force
The task force is developing an employment statement to post on the website as a tool for program directors. It will address areas of consideration for programs that hire FMGs into fellowship slots. The committee has recently completed a survey of OPOs, kidney and liver program directors, and credentialing offices to better understand the issues with FMGs. Key findings were presented to the council and a detailed analysis will be provided at the January 2011 council meeting.

Reimbursement Committee
The Reimbursement Committee continues to monitor issues regarding reimbursement of Kidney Paired Donation (KPD). The committee is also organizing a coding guide to help ASTS members collect every RVU due to them. The guide will be divided by organ and include donor, recipient and backtable codes. The first version will include template forms to assist surgeons and later versions will codify standards for when it is appropriate to use a modifier.

Standards Committee
The Standards Committee is hosting the winter symposium pre-symposium titled “Pay for Performance: An Update on National Quality Improvement Measures.” Additionally, the committee will host a Lunch & Learn Session to discuss the Physician Quality Reporting Initiative (PQRI) and the ASTS primer available on the website. The committee is also on track with the deadline for ASTS to submit topics for measure development with the Physician Consortium on Process Improvement (PCPI). If selected by PCPI, the measures will be developed in 2011 and submitted to CMS.

Scientific Studies Committee
The Scientific Studies Committee is working on a variety of initiatives to include optimizing data collection for DCD donors, establishment of a broad algorithm for the conduct of donor intervention or organ preservation studies, impact of center performance reporting on innovation in the field and a study on outcomes relative to length and quality of ischemia time.

Membership Committee
The membership committee was pleased to report the current membership total is 1722 members, including 1373 surgeons, 251 surgical associates, 47 non-physician scientists, 38 physicians and 13 honorary. The membership has grown from 174 members in 1974 and from 985 members in 2004. The concept of a resident membership category was discussed.

Ethics Committee
The Ethics Committee is working with the Scientific Studies Committee on an initiative to examine issues on both the donor and recipient side for the use of organs that are the result of experiments done on the donor. The goal is to encourage meaningful donor experiments while at the same time ethically involve the physicians and recipients in the decision to use such organs. The committee has also completed the requested revisions to the Declaration of Istanbul and is awaiting a response from TTS.

Living Donation Committee
Ms. Crist reported that the new process is in place whereby the joint societies living kidney donor workgroup is drafting recommendations to be put forward to the OPTN/UNOS Living Donor Committee as it drafts policy proposals. This new mechanism is designed to get medical input from ASTS, AST and NATCO on applicable policy proposals prior to release for public comment. Dr. Stuart Flechner serves as the Chair of the joint societies living kidney donor work group and the other ASTS representatives are Drs. Joseph Leventhal and Lloyd Ratner. ASTS anticipates this work group will submit its recommendations to the OPTN/UNOS Committee within six months.
A resurgent Republican Party won control of the House of Representatives on election day but fell short in the Senate, where Majority Leader Harry Reid survived a tea party-fueled challenge to win a fifth term. Fueled by voter anger about a sputtering economy and concerns about President Obama's first two years in office, Republicans made deep inroads in Democratic-held districts from coast to coast, knocking off House and Senate stalwarts. Republicans more than recovered their huge losses from the 2006 and 2008 cycles by claiming the seats of several highly endangered Democrats and winning at least 239 House seats, a 60 seat pickup with eight races hanging in the balance several days after the election. In fact, one of the races still unresolved is held by Congressman Jim Costa (D-CA), who heads the Congressional Organ and Tissue Donation Caucus. In the Senate, the final split is 53-47 yielding six Democratic losses.

House Minority Leader John Boehner (R-OH), expected to become the next Speaker of the House, indicated that the GOP's focus will be smaller, more accountable, less costly government, creating jobs, cutting spending, and reforming Congress. How the dynamics of the working relationship between Majority Leader Reid, Speaker Boehner, and President Obama evolve will determine whether the next two years create gridlock in Congress or whether bipartisan legislation can be forged.

The GOP’s first order of business in the lame-duck session will be trying to extend all the Bush tax cuts, which expire at the end of December. But Democrats still have a majority for now, and they will still have enough votes in the Senate next year to block an extension of the tax cuts for wealthy households if they decide to maintain this position. However, Congress can easily punt on the Bush tax cuts until next year without causing disruption. Assuming Congress acts before people have to file their 2011 returns, the delay might never be noticed.

Action on all of the outstanding FY 2011 appropriations bills and an extension of unemployment benefits are also big items that may be addressed by the lame-duck Congress, both of which may be temporarily addressed through a Continuing Resolution (CR). CRs temporarily fund programs of the federal government at the previous year's funding levels until some point in the next fiscal year. The result of funding the federal agencies through CRs is that funding increases or decreases (and “earmarks”) passed by the House or Senate—but not yet enacted into law—are not appropriated for the upcoming fiscal year.

**Medicare Physician Payment Policy:**

In early summer, Congress passed an extension (including a 2.2% update) of the Medicare physician fee fix through November 30, 2010, but without further Congressional action, physician payments will be cut by 24.9 percent beginning on December 1 and reduced by an additional six percent beginning January 1, 2011. The American Medical Association (AMA) has called for Congress to extend the existing fix for an additional 13 months through 2011 and the Obama Administration has endorsed this proposal. However, there has been no indication whether the lame-duck Congress will pass a longer term extension as requested by the AMA or a short-term extension until early the next Congress.

**Repealing Health Reform: Hours after winning the House, GOP leader John Boehner told reporters that he would like to repeal President Obama’s signature achievement, the health care reform law. The day after the Democrats’ huge losses at the voting booth, both Obama and Senate Majority Leader Reid signalled that they are open to “tweaking” the health care law but not to substantially dismantling it.

However, due to the cost of repealing many of these policies (which the Congressional Budget Office calculated to save $134 billion over ten years and over $1 trillion over 20 years) and facing the likely veto of any attempt at complete repeal, Republicans likely will have little choice but to whittle away at pieces of the reform law. Options for pursuing this course of action include either making changes to substantive provisions in the law or refusing to fund certain programs under the new law. Still, Republicans are expected to quickly introduce and try to pass bills to make good on their pledge to kill health reform, even if this means these repeal bills go nowhere in a Democratic-controlled Senate or when vetoed by President Obama.

Among the piecemeal targets will be a bevy of unpopular health reform law mandates that include the Independent Payment Advisory Board (IPAB), the CLASS Act (which creates a new voluntary program to help pay for long term services in one’s home), Comparative Effectiveness Research, the $2 billion prevention and public health fund, as well as reductions in reimbursement to Medicare Advantage (managed care) plans. The individual mandate, where people are required to either buy insurance or pay a penalty, may also be targeted by denying IRS funding for enforcement implementation even though the mandate is three years from implementation.
**Push for Immunosuppressive Coverage Continues in Lame-Duck:** Congressional leaders interested in passing a bill to address the Medicare coverage cliff for immunosuppressive drugs continue to press the case and intend to do so either in the lame duck session of the 111th Congress or the incoming 112th Congress. Reps. Camp (R-MI) and Kind (D-WI) see the Medicare physician payment fix as a possible means for passing recalibrated and updated versions of H.R. 1458/S.565, the Comprehensive Immunosuppressive Drug Coverage for Kidney Transplant Patients Act of 2009. A new version of the bill has been drafted to accommodate concerns lodged by other Congressmen and the Centers for Medicare and Medicaid Services (CMS). Congressman Camp, original cosponsor of the bill, is expected to ascend to the Chairmanship of the House Ways and Means Committee and this should be helpful in gaining passage of the bill, whatever the timing may be.

The ASTS, along with a number of other major transplant organizations, supports the changes to the immunosuppressive drug legislation. To maintain maximum procedural flexibility, ASTS and these groups decided it was better to have our congressional allies proceed with the new language “in-hand” rather than introducing a new bill in this Congress. This approach allows congressional sponsors to seek opportunities to pass the revised proposal as part of a larger bill if and when the opportunity presents itself.

The changes under consideration include: 1) making the bill’s eligibility provisions retroactive so that anyone who received a Medicare transplant would be deemed covered regardless of whether they had dropped off the Medicare rolls or not, 2) reducing the premium level provided to patients, and 3) delaying the effective date from 2012 until 2013 to allow enough time to implement the new law and associated regulations. A revised bill will be introduced in the new Congress if the current Congress does not address the issue.

**FY 2011 Spending Levels Remain in Limbo:** Little progress has been made since the congressional budget process ground to a halt at the beginning of the summer. As the national election season neared this fall, congressional focus turned completely to the electoral process playing out in the states. In fact, Congress left town much earlier than usual as the Democratic leadership tried to dampen voter anger.

This meant little focus was placed on resolving the outstanding appropriations bills left undone at the beginning of October, the start of fiscal year 2011. Moreover, prospects for passing these appropriations bills remain low as the wholesale changes in the Congressional makeup have decimated Democratic ranks and hamstrung their ability to negotiate with an emboldened Republican party. Democrats may be forced to pass a short- or long-term Continuing Resolution (CR), temporarily funding the programs of the federal government at the previous year’s funding levels until some point next Congress.

Still, earlier this year, Senate transplant champion Byron Dorgan (D-ND) was able to secure an additional $2 million increase in the FY 2011 funding levels for the Division of Transplantation’s (DoT) organ donation and transplantation programs which would take the overall DoT budget to $28,049 million in FY 2011. However, with the national wave of calls for reduced spending, this increase in funding is anything but secure. The real remaining threat is if the FY 2011 budget is cut back or if the new Congress is content to continue CR funding through the end of the next year (i.e. without the DoT increase).

But it is important to note that this year’s $2 million proposed increase, if enacted into law, would follow increases sponsored by Senator Dorgan (and supported by ASTS and the other transplant groups) of $1.403 million for FY 2009 and an additional $2 million for this year, FY 2010. Among other programs, such funding allows the federal government to support programs such as the National Living Donor Assistance Center (NLDAC) pilot project, a program jointly administered by ASTS and the University of Michigan since 2007.

**Arizona Medicaid Reduces Transplant Coverage:** On October 1, 2010, Arizona’s Medicaid program took the unprecedented step of discontinuing coverage for many transplants under the Arizona Care Cost Containment System (AHCCCS). The exclusion includes Medicaid transplant coverage for lung, pancreas only, pancreas after kidney, heart for non-ischemic cardiomyopathy, and liver for diagnosis of hepatitis C. The state took these actions due to its budgetary problems and asserted that limiting some transplant coverage could save the state $4 million per year. Arizona is the first State to do so but other states could follow suit.

The American Society of Transplant Surgeons (ASTS), the American Society of Transplantation (AST) and the United Network for Organ Sharing (UNOS) have sent a joint letter to Governor Jan Brewer (R-AZ) strongly opposing these coverage restrictions and requesting a meeting to discuss alternatives to the current policy, in coordination with state-based transplant surgeons and other stakeholders. Four Arizona transplant centers have already engaged in a new effort to assist the AHCCCS with cost containment. ASTS will continue to pursue every means available to have the State of Arizona immediately reconsider these critical cuts in benefits and to reinstate coverage for these transplant procedures.

The Final 2011 Medicare Physician Fee Schedule, which sets forth the final Relative Value Units (RVUs) for all physician services, including transplant procedures, was released on November 2, 2010. The table on page 11 sets forth the final Relative Value Units for transplant procedures for 2011 compared to 2010 under the Physician Fee Schedule and the percent change in RVUs. The Relative Value units for most transplant procedures will increase by 8-12% in 2011. To the extent that private payers calculate allowable charges based on Medicare RVUs, private payer allowances for transplant procedures should increase substantially next year.

However, actual payment by Medicare under the PFS is not determined based on the RVUs alone, but on the basis of the relative value units of a service multiplied by the conversion factor, and, this year more than ever, actual Medicare payment will depend on what Congress does with respect to the conversion factor. This year, CMS made methodological changes in the Medicare Economic Index (MEI) that make it necessary to reduce the conversion factor by about 8.2% in order to maintain budget neutrality (which CMS is required to do). This is in addition to about 1-2% in additional budget neutrality adjustments that are necessary for other reasons. These budget neutrality conversion factor reductions are in addition to a conversion factor reduction of about 25% that would apply beginning on December 1, 2011 as the result of the Sustainable Growth Rate (SGR). If Congress does not act to prohibit the SGR conversion factor reduction and the MEI and other budget neutrality adjustments, the 2011 conversion factor will be $25.5217, which is over 30% lower than the current conversion factor.

While it appears likely that Congress will intervene to preclude the 25% SGR reduction, it is less likely that Congress will prevent the 8.2% MEI conversion factor reduction from going into effect, or that Congress will intervene to stop about 1% in conversion factor reductions made by CMS to maintain budget neutrality.

For this reason, the chart on page 12 estimates the impact of the final 2011 rule using a conversion factor ($33.1513) that assumes that the SGR reduction will be precluded by legislation but that all budget neutrality adjustments go into effect. Under this assumption, Medicare payment for transplant procedures generally will stay about the same or decline slightly in 2011, despite the increase in RVUs. However, these figures are projections only, since the actual conversion factor determination for next year will be made by Congress.

In any event, for planning purposes, it would be prudent to assume that any service whose RVUs are not increased by at least 8% will be paid at a lower rate next year than this year.

CMS is also proposing to implement a provision included in the health care reform legislation, which mandates that, beginning in 2011, Medicare is to pay bonuses of 10% to general surgeons who practice in health professional shortage areas (HPSAs). Surgery bonuses are only available for surgical procedures with a 10-day or 90-day global period that are provided in a HPSA, and only if the physician has designated the specialty code of “General Surgery” as his or her primary specialty. A 10% bonus is also payable to primary care physicians who meet certain conditions.

Final DRG Payments for 2011 Include Modest Changes for Transplant Surgery
The final Inpatient Prospective Payment System (IPPS) Rule for 2011 was released in early August 2010. Overall payments to hospitals under the rule are expected to decrease by 0.4 percent from FY 2010 due to various IPPS changes, including a 0.25% reduction to the market basket update imposed by the Patient Protection and Affordable Care Act (PPACA) for discharges on or after April 1, 2010.

• Changes to Transplant DRG Weights
CMS recalibrates the DRG weights each year based on previous year charges and costs. The 2011 DRG weights include increases for heart, kidney, and liver DRGs and slight dips for lung and kidney/pancreas, with a somewhat larger reduction for pancreas transplants.

• CardioWest Temporary Total Artificial Heart System
Medicare will continue the new technology add-on of $53,000 for the TAH-t used as a bridge to heart transplant for heart transplant eligible patients with end-state biventricular failure. It declined to provide an increase in the add-on for the manufacturers’ modified device since that device is not yet approved by the FDA.

• Hospital Acquired Conditions
ABO blood incompatibility (ICD-9 code 999.6) is considered an HAC. CMS finalized its proposal to use new ICD-9 codes approved for 2011, associated with
ABO incompatibility reactions. These new ICD-9 codes replace 999.6 with five new diagnosis codes:

- ABO incompatibility reaction, unspecified (999.60)
- ABO incompatibility with hemolytic transfusion reaction not specified as acute or delayed (999.61)
- ABO incompatibility with acute hemolytic transfusion reaction (999.62)
- ABO incompatibility with delayed hemoloytic transfusion reaction (999.63)
- Other ABO incompatibility reaction (999.69)

If these complicating conditions are present, they would not be a basis for a higher DRG payment based on presence of complicating conditions or major complicating conditions. This could impact DRG assignment for heart and liver transplants. None of the other transplant DRGs are based on major complication/comorbidity (MCC) or complication/comorbidity (CC)

- Payments to Hospitals in Counties with Low Medicare Spending

For FY 2011 and 2012, PPACA provides an additional IPPS payment to hospitals that are located in counties in the bottom quartile of counties with the lowest risk-adjusted spending per Medicare enrollee. The total amount of payment available over the two-year period is $400 million. CMS is proposing to distribute $150 million in FY 2011 and $250 million in FY 2012. The final rule addresses CMS’ methodology for determining the bottom quartile of counties with the lowest Medicare spending, including development of a risk adjustment model and calculation of county level spending.

CMS Finalizes New Hospital Outpatient Payment Rates for 2011

On November 1, CMS released a final rule updating the policies and payment rates for hospital outpatient department services furnished in 2011 under the Hospital Outpatient Prospective Payment System (HOPPS).

The HOPPS Rule implements graduate medical education (GME) provisions of the Affordable Care Act. The Act requires CMS to identify unused residency slots and redistribute them to certain hospitals with qualified residency programs, with a special emphasis on increasing the number of primary care physicians. CMS is also required to redistribute residency slots from hospitals that close down to other teaching hospitals, giving preference to hospitals in the same or a contiguous area as the closed hospital. In addition, the law specifies how to count hours spent by a resident in certain training and research activities, as well as how to count hours spent by a resident in patient care activities in a non-hospital setting, such as a physician’s office.

In addition, the HOPPS Rule provides that drugs and biologicals that are not paid on a pass-through basis, would be paid based on 105 percent of the manufacturers’ average sales prices. This may affect payment for some immunosuppressive drugs administered to patients in hospital outpatient departments.

CMS indicated that it will continue to consider the establishment of a composite APC for stem cell transplantation and finalized a provision that would expand the current composite payment rate for certain clinic visits to include drug administration services.

OPTN/UNOS Board of Directors Meeting Highlights

The OPTN/UNOS Board of Directors met November 8-9 in St. Louis. It took action on a number of items, of which key topics are outlined below:

• The Board approved a proposal to allow matching for non-directed donors and donor chains in the recently established national pilot program for kidney paired donation (KPD) transplantation.

• The Board adopted significant revisions to pancreas allocation policy to promote equitable and efficient placement of pancreas offers from deceased donors. Once implemented, the match run for all pancreas offers will combine pancreas-only and simultaneous pancreas-kidney (SPK) candidates onto a single list. In addition, the new policy establishes minimum medical criteria relating to pancreatic function for SPK candidates to accrue waiting time priority.

• The Board accepted a series of modifications to policies relating to screening of potential deceased donors for transmissible disease and the communication of test results between organ procurement organizations, transplant centers and potential recipients.

• The Board approved a slate of nominees for open positions for the 2011-2012 Board term. Voting materials, including an election ballot and brief biographical sketches of each nominee, will be sent to voting representatives of OPTN/UNOS member institutions in early 2011.

An executive summary of all Board actions is available on the OPTN website: http://optn.transplant.hrsa.gov/members/executiveSummary.asp.

Public Comment Proposals

Six proposals for new or amended OPTN policies and bylaws are currently out for public comment; the deadline to receive responses is February 5, 2011. Following the public comment period, the committees sponsoring each proposal will convene to consider input and determine whether the proposals should be forwarded to the OPTN/UNOS Board as is, amended or withdrawn. To view the proposals and learn about commenting, visit the OPTN website: http://optn.transplant.hrsa.gov/policiesAndBylaws/publicComment.

Kidney Paired Donation Pilot Project

The first match run of the OPTN/UNOS kidney paired donation national pilot program was performed in late October. Among 43 candidates and 45 donors in the initial run, seven pairs were matched. The pairs came from six different transplant centers, three different coordinating centers and four different OPTN/UNOS regions. Additional developments will be announced as they become available.

For additional information about the kidney paired donation pilot program, visit the OPTN website: http://optn.transplant.hrsa.gov/resources/KPDPP.asp.

Center for Transplant System Excellence to Examine Potential for Future Deceased Donation

The Center for Transplant System Excellence, a new initiative of UNOS, will conduct a multidisciplinary study to estimate future deceased donor potential in the United States. The Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services will add nearly $1.7 million in federal funds to the OPTN contract over two years to support this study.

The Center will seek input from experts in organ procurement and transplantation as well as disciplines including system dynamics, public health, demography, epidemiology and geography. The goal of the study is to develop a dynamic model to estimate donor potential both nationally and regionally over the next five to ten years.

In addition to the overall number of potential donors, the study will seek to categorize them according to age and medical condition and how many may die of circulatory failure as opposed to brain death. The researchers will also examine current assumptions about in-hospital location of potential donors in light of possible future changes in where and when death is declared, as this may also affect the potential for donation.

This study represents the first major project for the Center for Transplant System Excellence. The center will utilize the expertise and capabilities of UNOS staff in collaboration with academic and clinical researchers, nationally and internationally, who share an interest in advancing the field of transplantation.

By Joel Newman
Assistant Director of Communications
UNOS
In October, the National Living Donor Assistance Center (NLDAC) had the opportunity to thank those that help make the program a success. Iby Diaz, NLDAC Assistant Coordinator, attended the annual Society of Transplant Social Workers (STSW) conference held in Atlanta to exhibit, educate, and promote the program.

The STSW Conference provided NLDAC an opportunity to connect and engage with its constituents, bringing together transplant social workers from all over the country who help to advance the NLDAC mission. The social workers invest their time and resources interviewing, screening and submitting NLDAC applications on behalf of potential living donors. Their work is invaluable to the success of NLDAC.

The NLDAC exhibit drew the attention of many participants seeking to learn more about what we do and why we do it, as well as thank program leaders for facilitating a program that supports the needs of their patients. A great deal of attention was also focused on informing social workers on how to enroll their transplant program and the training needed to take full advantage of NLDAC resources. The NLDAC is working to develop a strategy to reach these transplant centers who have not yet become participants.

Currently, the NLDAC receives approximately 50 applications per month. To learn more about how your center can participate, receive training and identify eligible donors visit www.livingdonorassistance.org.

NLDAC Attends the 2010 Society of Transplant Social Workers Conference
The ASTS 11th Annual State of the Art Winter Symposium promises to be more exciting and more interactive. ASTS opened the doors to a list of new learning experiences at every career level, while maintaining its focus — to be a topic-driven meeting that provides a medium for participants to hear expert opinions, assess emerging techniques and tackle the touch topics such as deciphering health care reform, rewarding excellence, and understanding regulations, standards and policies.

Register before January 5, 2011 to receive a pre-registration discount. Accompanying guests must be registered to attend evening events. See program for details. Discounted housing is available through December 16, 2010. Use the following link to register, to view programs or for additional symposium details http://www.asts.org/Meetings/StateArtWinterSymposium.aspx.

Your ASTS Historian has been busy with several projects. The most important, the Chimera Chronicles has fully entered its next phase with plans to undertake videotaping of distinguished transplant professionals during the 11th Annual State of the Art Winter Symposium in January. There may be a change in format with interviews incorporating a pair of surgeons when it would seem each may contribute best to our historical efforts if simultaneous recording with a close colleague is planned. Additionally, through efforts to integrate Dialysis Clinic, Inc. (DCI), the American Foundation for Donation and Transplantation (AFTD), and other supporters, the January sessions may include non-surgeon honorees from the early days of transplantation. We are working diligently to obtain additional funding so that important persons who were present as transplantation surgery and medicine developed give their voice to the history of our specialty. Please join our transplant luminaries at the Westin, Friday evening, January 14, 2010 as we honor the group during a networking reception.

Also during the ASTS Winter Symposium, we continue with the Annual David Hume Lecture sponsored by AFTD. I’m pleased to announce that Dr. J. Wesley Alexander, former President of the ASTS and founder of transplantation services at the University of Cincinnati will be giving the lecture. Dr. Alexander has enjoyed a busy and lengthy career in surgery and in basic science, and continues with interests in the mechanisms of rejection.

Finally, interactions with the American Medical Association (AMA) are now off the ground. The ASTS is now a member organization of the Specialty and Service Society (SSS) of the AMA, and I have been privileged to represent the ASTS to the SSS. The important issues before all of us practicing medicine and surgery are being carefully analyzed and addressed at the highest level of government by the AMA. Our own legislative efforts, of course, continue to be most important as well. Expanding our influence through the AMA is a way to multiply the force with which we impact legislative and regulatory issues.

Please continue to visit the ASTS website and view the Chimera Chronicles. Also, see our photo library for candid shots of our recent meetings. Please feel free to contact me for any projects that might hold your interest in expanding our great history of organ transplantation.

Business Practice Seminar
Thursday, January 13, 2011
As part of its commitment to facilitate ASTS members’ understanding of the business aspects of transplantation and provide education and guidance on transplant management and regulatory issues, the Business Practice Services Committee is pleased to sponsor the 4th Annual Business Practice Seminar held in conjunction with the ASTS State of the Art Winter Symposium. This year’s seminar will feature two exciting sessions: Achieving and Rewarding Excellence in the Transplant Team and Deciphering Health Care Reform.

Pre-Symposium Sponsored by the Standards Committee on Organ Transplantation
Friday, January 14, 2011
As part of its commitment to promote the development of high standards in patient care and to educate the membership about developing regulations, standards & policies, the ASTS Standards Committee is pleased to sponsor a Pre-Symposium event held in conjunction with the ASTS State of the Art Winter Symposium. This year’s Pre-Symposium event will feature an update on National Quality Improvement Initiatives from key stakeholders including the American Medical Association’s Physician Consortium on Performance Improvement (PCPI), the American College of Surgeons, private industry and Centers for Medicare & Medicaid Services. A brief overview of incentive payments available through the Physician Quality Reporting Initiative (PQRI) will also be provided.

Career Development Seminar
Friday, January 14, 2011
The Vanguard Committee developed the Career Development Seminar to assist junior members in developing as academic physicians and surgeons. This year’s seminar will address how today’s busy clinicians can conduct the research needed to move the field forward. Join us on Friday evening at 5:00 pm for this interactive session.

Lunch & Learn
Saturday, January 15, 2011
Join us on Saturday afternoon as we premiere a new informal event titled Lunch & Learn. Select ASTS committees will host single topic focused roundtable discussions over lunch on new or emerging issues in the field of transplantation. Register today for this inaugural event!

Vanguard Committee Presents

Francis Moore Excellence in Mentorship in Transplantation Surgery Award Recognition Ceremony and Reception
Saturday, January 15, 2011
5:30 - 7:00 PM
Following the ceremony, please join us for dinner in the Westin Diplomat Ballroom
7:00 - 10:00 PM

SURGICAL VIDEO PRESENTATION

4th Annual Surgical Video Presentation
This session starts early, so grab your coffee and head over to the main session room.

Sunday, January 16, 2011 - 8:00 - 9:40 AM

State of the Art Winter Symposium
Purpose: To provide an opportunity for investigation and scientific exchange to examine emerging dilemmas and issues associated with the growth of transplantation and the impact on patient outcomes.
The society believes that you are the future...if it comes down to it; we [ASTS] will defend this activity to the death. - Michael Abecassis, MD, MBA

Despite global economic hardships, ASTS recognizes the importance and value of providing educational initiatives for transplant fellows who, ultimately, are the future of the field. November 11-13, 2010 marked the 4th Annual Surgical Fellows Symposium, which was held in Scottsdale, AZ. Once again this academic conference promoted the ASTS mission to foster and advance the practice and science of transplantation.

The symposium has been one of the best educational experiences of my fellowship. - David Aranovich, MD

Over the course of three days, 61 fellows sat in on lectures presented by ASTS members discussing technical procurement pitfalls, transplant candidate evaluation, organ allocation, practical aspects of donor and recipient pairing, long-term patient management, lifelong transplant surgeon education and professionalism.

It’s been an excellent opportunity to learn about innovation in transplantation from faculty as well as connecting with fellows in the field of transplant surgery. - Alexander Maskin, MD
An Audience Response System was used throughout the symposium to allow fellows to gauge their knowledge against their peers and to capture opinions about current fellowship training standards.

This conference has been an excellent opportunity to learn the challenges in current practice in transplant surgery from some prominent leaders in the field.

- Jacob Clendenon, MD

Fellows received a unique opportunity through case discussions to interact closely with faculty from various institutions from around the country. Participants said that this rare experience is unparalleled, and something they won’t soon forget.

A Special Thank You:

PROGRAM PLANNING COMMITTEE:
Thomas E. Collins, MD
Program Chair
Johnny C. Hong, MD, FACS
Committee Member
Timothy M. Schmitt, MD
Committee Member

The symposium was made possible through the generous support of Astellas, Bristol-Myers Squibb Company, CSL Behring, Genentech, and Genzyme.
Inaugural ASTS Leadership Development Program
Northwestern University, Kellogg School of Management
Evanston, IL, November 7-9, 2010

The inaugural ASTS Leadership Development Program was a resounding success, bringing together surgeons and administrators for the only course of its kind in the field of transplantation. The venue was outstanding and the content was a perfect balance of business education and transplant specific leadership skills.

– Michael Abecassis, MD, MBA
Northwestern Memorial Hospital

The asts ldp should be mandatory for all division chiefs and administrators that are involved in the business of transplantation. It is worth every penny and the time you spend there.

– Betsy Tuttle Newhall, MD,
St. Louis University Hospital

A message from the Leadership Development Program planning chair:

I believe that the strength of this new course was its unique combination of core business skills (accounting, marketing, negotiation) with transplant specific application. I am grateful to both the ASTS and the Kellogg School of Management faculty for their efforts to create a dynamic, interactive course. I believe that the course we designed offered participants the opportunity to identify direct applications of the topics covered in the sessions.

I would like to credit the participants for engaging with the faculty and each other to really make this course successful. I was thrilled that the participants were able to share openly with their colleagues to attempt to find common solutions to difficult problems.

I think one of the highlights of the program was the presentation from Thomas Hamilton from CMS. Mr. Hamilton provided an outstanding summary of the current issues facing the payer and regulatory authorities. I would like to personally thank him for his time and comments.

Finally, I would like to thank the ASTS council for supporting this program. As the economic challenges for all of our centers increase, the value of the society has never been more evident. Through the support of this program, the ASTS council has provided a valuable resource for the membership as we continue to lead programs vital to our patients and institutions.

David Axelrod, MD, MBA, Dartmouth Hitchcock Medical Center

American Transplant Congress
Philadelphia
April 30, 2011 - May 04, 2011
This meeting is designed for physicians, surgeons, scientists, nurses, organ procurement personnel, and pharmacists who are interested in the clinical and research aspects of solid organ and tissue transplantation.

Overview of the American Transplant Congress
- To provide a forum for exchange of new scientific and clinical information relevant to solid organ and tissue transplantation.
- To create an arena for the interchange of ideas regarding care and management of organ and tissue transplant recipients.
- To facilitate discussions of socioeconomic, ethical, and regulatory issues related to solid organ and tissue transplantation.

Abstract Deadline:
December 2010

www.atcmeeting.org
Now is the time to begin thinking about serving on an ASTS committee or in an ASTS leadership position. In January, ASTS will be accepting nominations for the following positions:

- Secretary
- President-Elect
- Three Councilors-at-Large

Committee appointments are for three years and begin immediately following the American Transplant Congress. Self nominations are encouraged. Nomination letters should include the committee(s) the nominee is willing to serve on as well as proposed contributions to the committee(s). Submission deadline is Tuesday, March 1, 2011. Visit the ASTS website to learn more about ASTS committees and the nomination and appointment process.

E-mail, Fax or Send Letters to:
ASTS President & Nominating Committee Chair

Helping You Help Your Patients

The American Society of Transplant Surgeons (ASTS) has created 30 minute educational videos that feature living donors and recipients sharing their experiences for those considering donation or transplantation. The video provides extensive coverage of what to expect before and after surgery. These specialized videos are meant to be utilized as a first step in educating potential patients before the initial clinic visit.

✓ Living Kidney Donation: What You Need to know
✓ Kidney Transplantation: A Guide for Patients and their Families
✓ Living Liver Donation: What are the Risks and Benefits

Spanish Versions are available

ORDER DETAILS
✓ $15 ASTS Members  ✓ $25 Non members  ✓ 50 or more: $12.50/video plus shipping and handling
✓ 100 or more: $10.00/video plus shipping and handling

Visit the ASTS website at www.asts.org to view the videos and to place an order.
