Dear Senator Brown:

The undersigned organizations representing health care providers, scientists, public health, patients, industry and advocates offer our support for the Strategies to Address Antimicrobial Resistance (STAAR) Act and thank you for your leadership in re-introducing this important legislation. The STAAR Act would help continue and expand our federal response to the public health crisis of antimicrobial resistance. Antimicrobial resistant infections sicken over two million Americans every year, causing at least tens of thousands of deaths. Globally, over 700,000 people die every year due to antimicrobial resistance. The infections are painful, difficult to treat, frequently recur and cost approximately \$20 billion to the U.S. health care system annually.

Antimicrobial resistance threatens to undo many of the gains of modern medicine, compromising the ability to safely perform complex surgeries, provide cancer chemotherapy and care for immunocompromised individuals. Antimicrobial resistance is a complex problem that requires a multifaceted solution including investments in surveillance and data collection, antimicrobial stewardship and research. The STAAR Act seeks important advancements in these areas.

The overuse and misuses of antimicrobial drugs drives the development of resistance. Antimicrobial stewardship efforts help optimize antimicrobial drug use and reduce overuse and misuse. The STAAR Act would help advance these important activities. Importantly, the STAAR Act would also strengthen efforts to prevent the transmission of antimicrobial resistant infections. In addition, STAAR would enhance research to deepen our understanding of resistance and the best ways to combat it.

In 2016, the United Nations made a global commitment to combat antimicrobial resistance, which was reaffirmed by the G20 in 2017. The STAAR Act will help strengthen the US position as a leader in protecting patients from this serious threat. Thank you for your leadership on this important issue.

Sincerely,
